

HONEYCOMB:

Honeycomb (or Waffle) fabric is usually constructed using cotton or microfiber, woven in a way which makes it very absorbent. This waffle weave fabric also allows air to flow through the 'towel' so that it dries very quickly. Waffle fabrics are made in a range of weights and are ideal for wall coverings, blinds and some upholstery.

For instance, when used in the construction of Blinds, the fabrics can come in varying opacities, allowing you to achieve the optimal level of light control and privacy for your space. In addition, all honeycomb blind fabrics have a white backing that acts as a reflector, which helps keep your space cool and comfortable. With these dual-sided fabrics, you can give each room a signature look while maintaining a uniform appearance from the outside.
