

JERSEY:

Jersey is a knitting fabric that is predominantly used in the clothing manufacture industry. It was originally made of wool, but is now made up of a mixture of wool, cotton, and synthetic fibers. Since medieval times Jersey, Channel Islands, where the material was first produced, had been an important exporter of knitted goods and the fabric in wool from Jersey became very well known. The fabric can be a very stretchy, single knit, usually light-weight with one flat side and one piled side. When made with a lightweight yarn, this is the fabric most often proffered and used to make T-shirts. It can also be a double knitted jersey (interlock jersey), with less stretch, that creates a heavier fabric of two single jerseys knitted together to leave the two flat sides on the outsides of the fabric, with the piles in the middle.

Jersey is considered to be an excellent fabric for draped garments, such as dresses, and women's tops as then fabric can stretch up to 25% along its grain. Garments made from Jersey have plenty of 'give' as the wearers move and can also cling to the body as the fabric expands and contracts. This fabric is available in a wide range of colors and patterns to suit all tastes.
